Underlined items indicate noteworthy factors.

F indicates first record for the year.

FF indicates first record for the fall migration though recorded earlier in year.

T = Town of

ph = photograph available through observer or eBird

NMWMA = Northern Montezuma Wildlife Management Area, Wayne County

HANA = High Acres Nature Area, T. of Perinton

Total for the year to date	280	274	272.2

## **Notes:**

- 1. Dry conditions persisted through the month, enough for the U.S. Drought Monitor to upgrade parts of the region to moderate drought. Dryness was most evident by stunted crops throughout the Genesee Valley and Wyoming County. Temperatures averaged 72.1°F, 0.2°F below normal. Only July 20<sup>th</sup> and 23<sup>rd</sup> reached above 90°F, although many days in the high 80s matched with increasing humidity later in the month contributed to many unbearable days. Precipitation averaged 1.78 inches for the month, 1.78 inches below average, with about 0.94 inches of that falling on the 18<sup>th</sup> in a widespread rain event. Strong thunderstorms were mostly absent from the first half of the month, but the more seasonable isolated thunderstorms were common in the latter half of the month. A strong line of thunderstorms on the morning of the 28<sup>th</sup> produced a rare EF-2 tornado in central Wyoming County. The 500-yard-wide tornado knocked down a barn and damaged several other structures over a 10 mile path.
- 2. The popular locations in the region continued to receive regular coverage and some late season atlas effort was prevalent in the eBird download. It was nice to see that some observers made efforts in some more remote locations in the southern part of the region. The eBird download came out at just over 44,000 lines after out-of-region filtering. No outstanding high counts of species were recorded. Sedge Wren at two spots, a Forster's Tern, and a rare midsummer Long-tailed Duck were the only significant headlines in the region for July.
- 3. Counts were generally lower than expected for some of the common breeding waterfowl like Mallard and Wood Duck. The Northern Montezuma Wildlife Management Area and the Lake Ontario shoreline were the places where the uncommon summer waterfowl appeared, most notably a Long-tailed Duck at Irondequoit Bay Outlet. A male Common Goldeneye appeared at the Braddock Bay East Spit. Green-winged Teal were also occasionally seen all month at the East Spit. An adult male Ring-necked Duck was seen for one day at Twin Cedars Environmental Area in Avon. Mute Swan numbers on Braddock Bay were down from last July, but likely just distributed to the nearby ponds.
- 4. No significant gatherings of Chimney Swifts were observed, with the highest count being 16 at the Brickyard Trail in Brighton. Lower high counts than expected of Common Gallinule,

American Coot, and Pied-billed Grebe persisted off Van Dyne Spoor Road in the tract preferably listed by some as the Sandhill Crane Unit in the NMWMA. A lone Sandhill Crane was observed flying over Braddock Bay on the 27<sup>th</sup>, with a few others at known breeding sites.

- 5. Fall shorebird migration picked up towards the end of the month totaling 16 species. The East Spit was the best location and received constant coverage. Whimbrel had a high count of 5 on the 18<sup>th</sup>. A Long-billed Dowitcher was seen and photographed by one observer at the East Spit on the 30<sup>th</sup>. The only report of Upland Sandpiper came from the Geneseo Airfield on the 24<sup>th</sup>. A Forster's Tern was found at the East Spit on the 19<sup>th</sup> by Michelle Gianvecchio and persisted until the 23<sup>rd</sup>. It was seen by a few others as well but not as heavily reported as the June Braddock Bay individual.
- 6. Mike Tetlow noted a small dispersal flight of Red-tailed Hawks and Bald Eagles from the Braddock Bay hawk banding station on 11<sup>th</sup>, with 33 Bald Eagles being a highlight. The summer hawk count begins in August. Some additional raptor movement was noted on the 30<sup>th</sup> and 31<sup>st</sup> from the platform. There were 118 lines of American Kestrel, 10 lines of Merlin, and nine lines of Peregrine Falcon in the eBird download.
- 7. Red-headed Woodpecker was reported at 10 locations. Swallow numbers were generally low, with moderate numbers of Purple Martins at a few locations along the Lake Ontario shoreline as well as the Conesus Inlet WMA. Bank Swallow numbers were lower than in recent years at the large colonies along the lakeshore. The Sedge Wren at Burger Park from June continued into this month and a second singing bird was found towards the end of the month singing simultaneously. Another Sedge Wren was found at the end of Morgan Road in the NMWMA behind the DEC facility. Small numbers of warblers that breed in the hills around the Finger Lakes and Letchworth SP were reported as well. The Wetmore Road spot in southeast Livingston County south of Harriet Hollister Spencer Recreation Area continues to be our region's only Prairie Warbler stronghold. Something of a surprise among the passerines is the very low numbers of reports for Goldencrowned Kinglet and some of the scarcer breeding warblers typically found in the hills south of Rochester. One might expect better numbers in years such as this with active breeding bird atlas work underway. This bears future attention.
- 8. Please submit reports to eBird, post them on GeneseeBirds, and/or send by the 5th of the month to Nick Kachala, nicholaskach@gmail.com.
